ABOUT THIS PROFILE

Software Engineer with hands-on experience in data integration, ETL development, and business intelligence. Skilled in transforming raw data into structured insights using tools like Informatica Cloud, PowerCenter, Oracle, Unix, and Power BI. Delivered scalable data pipelines and interactive dashboards by cleaning and modelling sales data from diverse sources. Adept at designing star schemas, building ETL workflows, and visualizing key performance metrics to support data-driven decision-making across business functions.

RESTAURANT ANALYSIS

A data integration project focused on analyzing historical sales data from multiple restaurant outlets. The goal was to perform data cleaning and transformation on source data, build ETL workflows, and generate visual insights to support strategic business decisions.

- Informatica Cloud / PowerCenter – Conducted data cleaning and transformation, including handling missing values and resolving datatype inconsistencies (e.g., replacing string "null" in numeric fields with default values).
- ETL Workflow – Designed and implemented a star schema with dimension tables (Dim_Hotel, Dim_City, Dim_Speciality) and a central fact table (Fact_Hotel) to store transformed and structured data.
- Environment – Informatica Cloud/PowerCenter, SQL Developer, csv source file.
